Sanborn CitySets® Maintenance Program

Updates for Existing Citysets Downtown Data Sets

Is your city's data out of date? Over the past 10 years Sanborn has mapped, recorded, and identified as much as 36% change in the central business districts of 40 of the largest cities in USA. Cities are constantly evolving, expanding, updating, deconstructing, and redesigning, creating the need for an updated dataset for a broad range of users.

Created over ten years ago, Sanborn CitySets® was the first product of its kind—an off-the-shelf GIS base product consisting of highly accurate vector, raster, elevation, and attributes databases for 40 of the largest cities in the United States.

Why CitySets Maintenance?

Current data is often the single largest information value for those making financial or risk decisions, integrating databases, or producing consumer content. Addresses and buildings need to be current for applications such as routing and emergency response. Buildings need to be updated for city and architectural planning, and right-of-way analysis.

What are the Benefits of CitySets Maintenance?

- Lower annual cost for updated city data
- No city older than 3 years
- Complete database update for changed objects
- Influence and plan for city updates
- Historical and change date available*
- Custom area or additional feature data available*

**cost available on request*

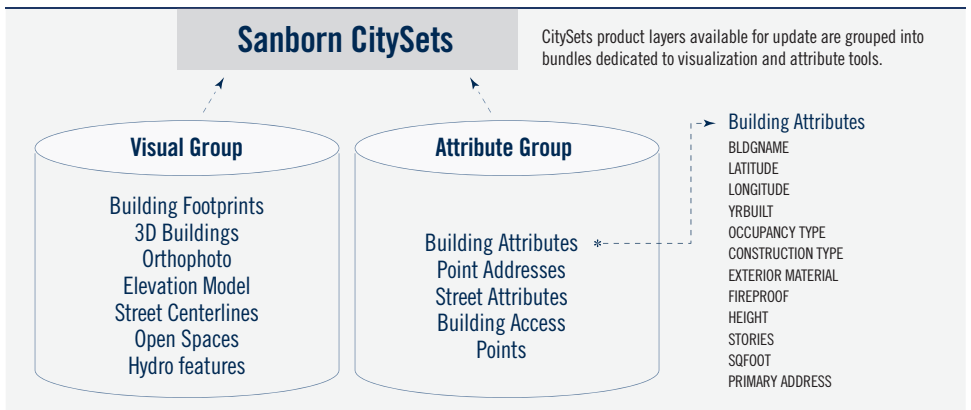

Who Benefits from CitySets Maintenance?

- City, State, County, and Federal agencies
- Land Planning and development authorities
- Public and social policy officials
- Navigation and augmented realty vendors
- Environmental and health bureaus
- Transportation and land use authorities
- GIO and infrastructure administrators
- Location-based solution providers
- Electronic and web gaming companies
- Architectural, engineering, construction firms

Other Maintenance Benefits

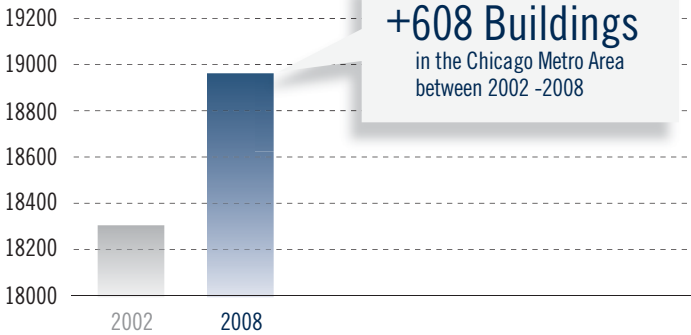

In addition to data currency and the providing input for annual priority updates, subscribers benefit from the following added services:

- Technical Support (8-5 MST) and software bug fixes (Released Quarterly)
- Correction/update input—Sanborn will correct customer-reported errors or omissions
- Additional Cities—at Sanborn's discretion, cities may be added to the product line and will become available in the maintenance program.

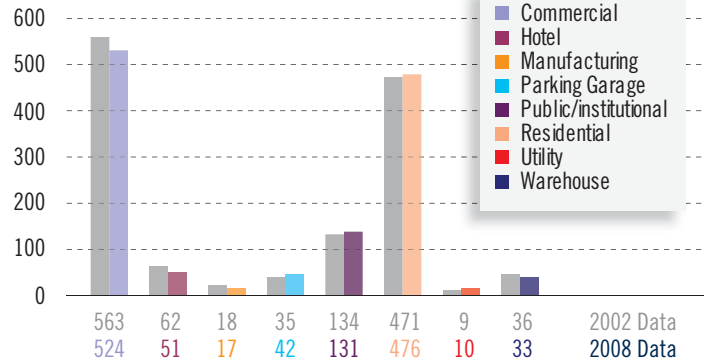

Chicago Data Sample

Building Quantity Increase Chicago, 2002-2008

Above: Chicago, Illinois ortho visualization layers show the demolition of buildings on a block location flown circa 2002 (left). The image on the right, shows an updated ortho for the same location, flown circa 2008.

Building Change / Usage Breakdown Chicago 2002-2008

Maintenance Fees / City Update Schedule

Yearly updates will include the cities shown on the right. Updates will be planned to maximize cost efficiencies by grouping cities based on location. It may be possible to alter the city update schedule with sufficient advance notice.

Annual Maintenance Fee—Attribute Group

Building Attributes, Point Addresses, Street Attributes, Building Access Points

Annual Maintenance Fee—Visual Group

Building Footprints, 3D Buildings, Orthoimagery, Elevation Models, Street Centerlines, Open Spaces, Hydro feat.
